

SugamFlow Polyclinic — End-to-End Testing Guide

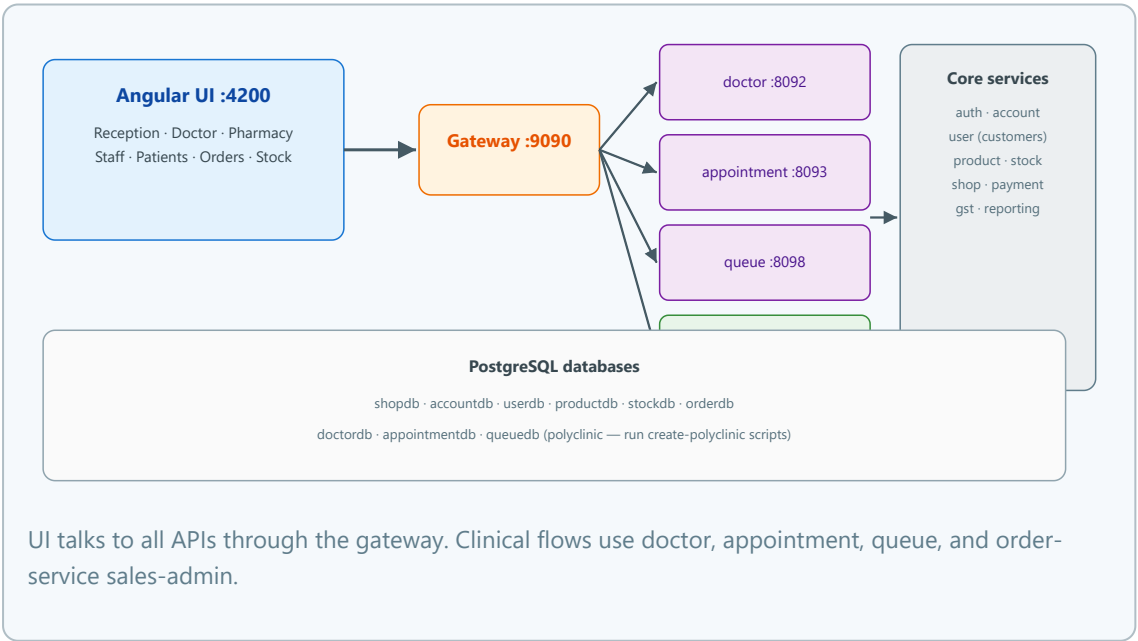

Document: POLYCLINIC-E2E-TESTING-GUIDE | **Shop example:** TRUST-MEDI-01 (Trust Medi Centre)
| **Business type:** POLYCLINIC | **Generated:** May 2026

Contents

- 1. System architecture
- 2. Patient journey (target flow)
- 3. One-time local setup
- 4. Test users and permissions
- 5. Step-by-step test flow (Phases 0–8)
- 6. 30-minute smoke test script
- 7. URL cheat sheet
- 8. Troubleshooting
- 9. UI gaps (plan vs today)

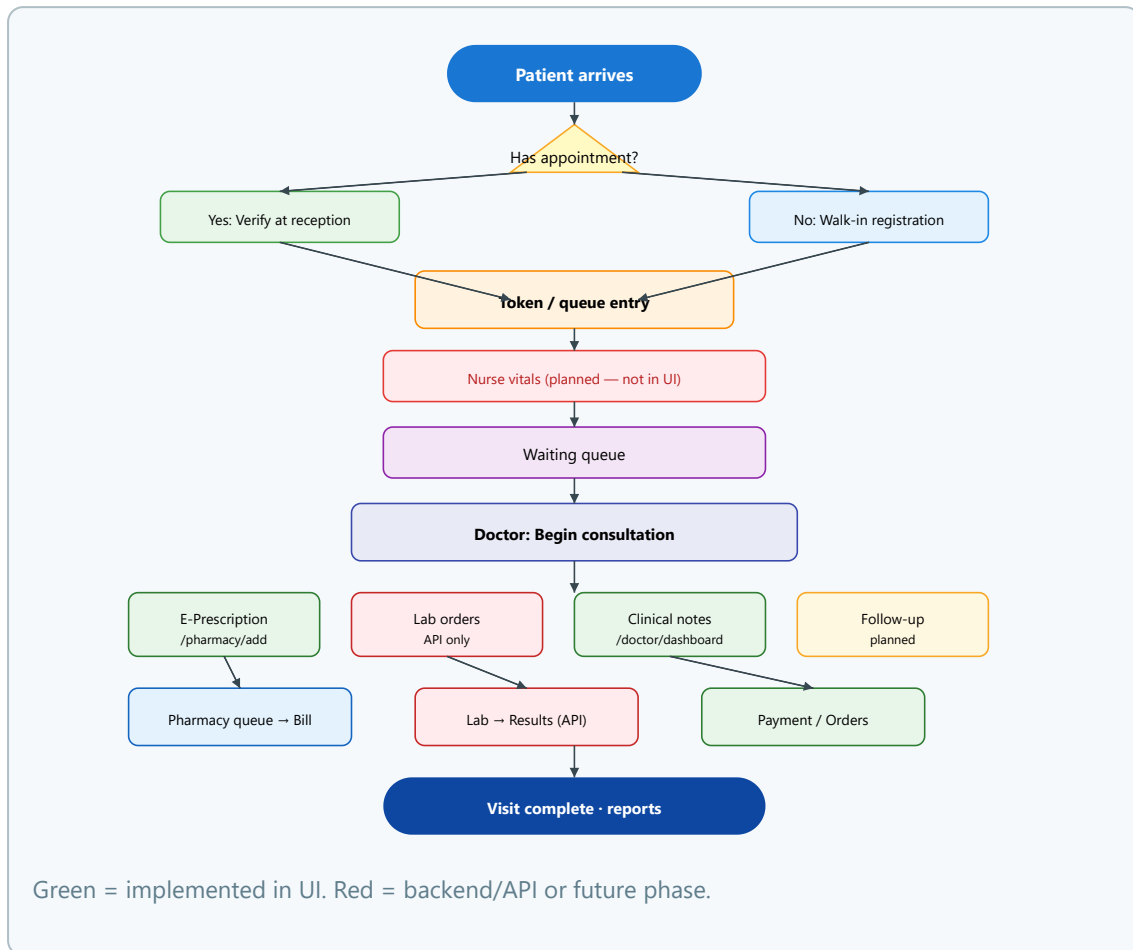

1. System architecture

Local stack: Angular UI on port 4200 , API Gateway on 9090 , polyclinic microservices on 8092–8098 .

2. Patient journey — target flow diagram

Ideal polyclinic journey (from `docs/diagrams/06-polyclinic-patient-journey.mmd`). Items in red are partial or API-only today.

3. One-time local setup

3.1 Start Docker services

```
cd D:\sugamFlow
powershell -NoProfile -ExecutionPolicy Bypass -File .\start-local.ps1 -EnvFile .env.local
```

Includes: `doctor-service` (8092), `appointment-service` (8093), `queue-management-service` (8098), `gateway` (9090), `auth`, `account`, `user`, `order`, `product`, `stock`.

Check	URL
Gateway health	<code>http://127.0.0.1:9090/actuator/health</code>
Doctor service	<code>http://127.0.0.1:8092/actuator/health</code>
Appointment service	<code>http://127.0.0.1:8093/actuator/health</code>

Queue service	http://127.0.0.1:8098/actuator/health
---------------	---

3.2 Polyclinic PostgreSQL (first time)

1. `infra/postgres/create-polyclinic-01-users-only.sql` — roles
2. `infra/postgres/create-polyclinic-02-create-databases-only.sql` — doctordb, appointmentdb, queuedb
3. `infra/postgres/create-polyclinic-03-grants-only.sql` or `run-fix-polyclinic-as-postgres.bat`

3.3 Trust Medi demo data

```
psql -U postgres -h 127.0.0.1 -p 15432 -d shopdb -f infra/postgres/patches/update-trust-medi-01-polyclinic-gst.sql
psql -U postgres -h 127.0.0.1 -p 15432 -d doctordb -f infra/postgres/patches/seed-trust-medi-01-doctors.sql
```

3.4 Start Angular UI

```
cd D:\sugamFlow\shop-management-ui
npm start
```

Open <http://localhost:4200> and select outlet **TRUST-MEDI-01**.

4. Test users and permissions

Role	Login	Use for
Super admin	Super Admin mode → platform shop, then switch outlet	Full setup, import products
Shop owner	Shop ID <code>TRUST-MEDI-01</code>	Day-to-day clinic operations
Reception staff	Staff invite → set password	<code>/reception/dashboard</code>
Doctor staff	Staff invite + doctor row in doctordb	<code>/doctor/dashboard</code>
Pharmacist	Staff with dispense permissions	<code>/pharmacy</code>

Staff permissions (Staff → Configure access)

Permission	Enables
<code>MANAGE_CUSTOMERS</code>	Patients (Customers module)
<code>MANAGE_STAFF</code>	Invite staff
<code>MANAGE_APPOINTMENTS</code>	Reception / appointments
<code>MANAGE_CONSULTATIONS</code>	Doctor consult save
<code>MANAGE_QUEUE</code>	Queue operations
<code>MANAGE_ORDERS</code>	Orders, billing, call-next (with queue fix)
<code>DISPENSE_MEDICINES</code>	Pharmacy / prescriptions
<code>MANAGE_STOCKS</code>	Inventory
<code>MANAGE_LAB_ORDERS</code> / <code>MANAGE_LAB_RESULTS</code>	Lab APIs (no UI page yet)

Important: Re-login after changing staff permissions so the JWT includes new claims.

5. Step-by-step test flow

Phase 0 — Clinic master data

Step	Where	Action
0.1	Login	Super admin or owner → outlet <code>TRUST-MEDI-01</code>
0.2	Header tabs	Expect: Pharmacy, OPD & billing, Store & inventory, Staff — not retail Products tab (POLYCLINIC)

0.3	Sidebar import	Add medicines to catalog (import products / demo SQL)
0.4	/stocks	Receive stock for prescription line items

Phase 1 — Patient registration

Step	URL	Action
1.1	/users	Add customer: name, 10-digit phone, email, address
1.2	/pharmacy/add	Or quick-add patient via search when creating Rx
1.3	/reception/dashboard	Select patient from dropdown for walk-in

Phase 2 — Doctor registration (two parts)

Part A — Staff account: /staff → Invite → set password link → Configure access (MANAGE_CONSULTATIONS, etc.).

Part B — Doctor profile (OPD dropdown): No full UI yet. Run seed SQL or POST /api/v1/doctors with accountId linked to staff user.

Step	Verify
2.4	/doctor/dashboard — doctor dropdown shows <i>Dr. Trust Medi</i> (after seed)

Phase 3 — Reception (walk-in + token)

Step	URL	Action
3.1	/reception/dashboard	Patient + doctor + chief complaint
3.2		Click Register walk-in + token
3.3		Confirm row in Today's appointments

Phase 4 — Doctor OPD

Step	URL	Action
4.1	/doctor/dashboard	Select doctor → Refresh
4.2		Queue shows WAITING / COMPLETED
4.3		Begin consultation on next patient
4.4		Chief complaint, diagnosis, notes → Save consultation
4.5		Complete visit

Phase 5 — Prescription (e-Rx)

Step	URL	Action
5.1	/pharmacy/add	Select patient (search / quick-add)
5.2		Doctor name, add line items (product, qty, dosage)
5.3		Save prescription → Prescription queue
5.4	Queue	Create Bill → order created, Rx DISPENSED

Phase 6 — Pharmacy / medical shop billing

For POLYCLINIC, the **Pharmacy** module is the dispensary; general billing uses **Orders**.

Step	URL	Action
6.1	Prescription queue	Create Bill from Rx
6.2	/orders	Verify bill, payment, GST if enabled on shop
6.3	/orders/add	OTC walk-in sale
6.4	/stocks	Verify stock deduction

Phase 7 — Lab (API / dashboard)

No dedicated Lab UI in Angular. Use sales-admin API or owner dashboard counts.

```
POST http://127.0.0.1:9090/api/v1/sales-admin/lab-orders
Headers: Authorization, X-Tenant-Id, X-Shop-Id, X-Auth-Role
Body: { "branchId": 1, "customerId": <patientId>, "consultationId": <id>,
  "doctorName": "Dr. Trust Medi", "status": "ORDERED",
  "items": [{ "testCode": "CBC", "testName": "Complete Blood Count" }] }
```

Phase 8 — Reports

Step	URL	Action
8.1	/owner-dashboard	Consultations, prescriptions, lab pending counts

6. 30-minute smoke test (one patient)

1. Add patient *Test Patient OPD* at /users .
2. Ensure doctor seeded or invited + doctordb profile.
3. Reception: walk-in + token.
4. Doctor: begin consult → save → complete visit.
5. Pharmacy: prescription → save → Create Bill.
6. Orders: verify bill; Stock: verify quantity.
7. (Optional) Postman: lab order for same customer/consultation.
8. Owner dashboard: refresh stats.

7. URL cheat sheet

Screen	Path
Login	/login
Owner home	/owner-dashboard
Reception	/reception/dashboard
Doctor OPD	/doctor/dashboard
Pharmacy / Rx	/pharmacy , /pharmacy/add
Patients	/users
Staff	/staff
Orders	/orders , /orders/add
Stock	/stocks

8. Troubleshooting

Symptom	Fix
Doctor dropdown empty	Run <code>seed-trust-medi-01-doctors.sql</code> ; verify doctordb exists
404 on doctor/appointment/queue	Restart <code>ng serve</code> ; check services on 8092–8098
Staff invite auth timeout	Restart account-service + auth-service
Begin consultation forbidden	Rebuild queue-management-service; grant <code>MANAGE_CONSULTATIONS</code> or <code>MANAGE_ORDERS</code> ; re-login
No products for Rx lines	Import medicines — Products tab hidden for POLYCLINIC
Prescription save JSON error	Restart order-service (EntityGraph fix on items)
Invalid login after startup	Wait ~1 min for auth/gateway/Postgres

9. UI gaps (plan vs today)

- Full doctor registration UI (departments, schedules, fees)
- Lab worklist UI
- EMR (vitals, allergies, timeline on doctor screen)
- Appointment booking calendar (walk-in only on reception today)
- Nurse vitals screen

See `docs/POLYCLINIC-MANAGEMENT-IMPLEMENTATION-PLAN.md` and `docs/diagrams/06-polyclinic-patient-journey.mmd` .
