

SugamFlow Field Force — Flow & Salesman/Promoter Dashboard Guide

This document explains the **Lead** → **Conversion** process for business promoters and salesmen, how the **Field Force Workspace** dashboard works after the update, and how it differs from the old “fake shop registration” flow.

For technical architecture, see [FIELDFORCE-LEAD-ARCHITECTURE.md](#).

Other formats

Format	File
Hindi (Markdown)	FIELDFORCE-SALESMAN-PROMOTER-GUIDE-Hindi.md
PDF (English)	fieldforce-guides/FIELDFORCE-Salesman-Promoter-Guide-English.pdf
PDF (Hindi)	fieldforce-guides/FIELDFORCE-Salesman-Promoter-Guide-Hindi.pdf

Generate PDFs: from docs/ run `npm install` then `npm run pdf:fieldforce:all`.

1. Who uses what

Role	Login role (JWT)	Landing page	Primary job
Business promoter	FIELD_FORCE_PROMOTER	/field-force/workspace	Owns territory; creates leads; may convert high-value prospects
Salesman	FIELD_FORCE_SALESMAN	/field-force/workspace	Works under a promoter; creates leads assigned to self
Super admin	SUPER_ADMIN	Platform / field-force admin	Manages promoters, salesmen, commission plans (separate screen)

Promoter and salesman accounts must include `promoterId` or `salesmanId` in the auth login response (from `auth_account`). Without that id, the workspace shows an error and cannot attribute leads.

2. Old flow vs new flow (why the dashboard changed)

Before (deprecated)

Field visit → Enter "External shop ID" + shop name in workspace
→ Saved as `shop_registrations` (looked like a real shop)
→ Polluted shop/customer data and reports

Dashboard showed: Tenant shops, pending shop approval, shop registration form.

After (current)

Field visit → Save BUSINESS LEAD (prospect only)
→ Log activities (visit, demo, follow-up, ...)
→ Conversion pipeline (KYC → subscription → complete)
→ REAL shop created in shop-service + owner invite email

Dashboard shows: Lead counts, converted leads, activities, lead list, activity log, conversion panel.

Topic	Old	New
Prospect storage	shop_registrations	business_leads
Real shop creation	At registration time (wrong)	Only on Complete conversion
Duplicate control	Weak	Mobile / GST / name / GPS checks
Commission triggers	Shop approval	Lead created, demo, conversion
UI entry	"New shop registration"	"New business lead"

Legacy **shop registrations** API still exists for old data only. **Do not use it for new prospects.**

3. End-to-end business flow

```
flowchart TB
    subgraph FieldUser["Promoter / Salesman – Field Force Workspace"]
        A[Create business lead] --> B[Log field activities]
        B --> C{Ready to onboard?}
        C -->|No| B
        C -->|Yes| D[Mark KYC verified]
        D --> E[Save subscription plan]
        E --> F[Complete conversion]
    end

    subgraph Backend["fieldforce-service"]
        A --> L[(business_leads)]
        B --> ACT[(field_activities)]
        F --> CONV[(lead_conversions)]
    end

    subgraph Shop["shop-service"]
        F --> G[Create shop FF-LEADCODE]
        G --> H[Owner password invite via auth-service]
    end

    subgraph Result["Outcome"]
        H --> I[Lead status = CONVERTED]
        G --> J[Shop visible in registry PENDING activation]
    end
```

Lead statuses (pipeline)

Status	Meaning
NEW	Just created
CONTACTED	Visit/call logged
INTERESTED	Engagement progressing
DEMO_GIVEN	Demo activity recorded
FOLLOWUP	Follow-up scheduled/done
NEGOTIATION	Subscription stage
CONVERTED	Shop created; closed won
REJECTED	Lost
DUPLICATE	Marked duplicate

Statuses can advance automatically when certain activities are logged (e.g. DEMO → DEMO_GIVEN).

Conversion stages (technical)

Stage	When
VERIFICATION	Conversion started
KYC	KYC marked verified
SUBSCRIPTION_SELECTION	Plan saved
MERCHANT_CREATION / SHOP_CREATION	During complete
COMPLETED	Shop + invite succeeded
FAILED	Shop-service or invite error

4. Salesman / promoter dashboard — layout and metrics

URL: /field-force/workspace

Component: shop-management-ui → FieldForceWorkspaceComponent

API: GET /api/v1/fieldforce/analytics/dashboard (extended summary)

4.1 Top summary cards

Card	Source field	Meaning
Leads	leads	Total active business leads for tenant
Converted	leadsConverted	Leads that reached CONVERTED
Activities	activitiesThisMonth	Field activities logged (tenant-wide count)
Legacy shop regs	shopsLegacy	Old shop_registrations count (historical)

4.2 Left column — create & list

1. **New business lead** — form: business name, mobile (required), owner, city, state, etc.
2. **My leads** — clickable list filtered by role:
 - **Salesman:** only leads where `assignedSalesmanId` = your id
 - **Promoter:** only leads where `createdByPromoterId` = your id

4.3 Right column — selected lead detail

Appears when you **click a lead** in the list.

Section	Actions
Lead header	Code (LD-123), status badge, shop id if converted
Log field activity	Type, notes, next follow-up date → Log activity
Activity history	Chronological list for this lead
Conversion pipeline	Subscription, KYC checkbox, owner username/email, Mark KYC , Save subscription , Complete conversion

5. Step-by-step — salesman / promoter daily use

Step 1 — Log in

1. Use invite/login with role `FIELD_FORCE_SALESMAN` or `FIELD_FORCE_PROMOTER`.
2. After login you are redirected to **Field force workspace** (not the shop POS).

Step 2 — Create a prospect (lead)

1. Fill **Business name** and **Mobile** (required).
2. Click **Save lead**.
3. System checks duplicates (same mobile, similar name, etc.). If duplicate, you get an error — use a different record or resolve offline.
4. New lead appears in **My leads** with status `NEW` and code `LD-{id}`.

Attribution:

- Salesman → `assignedSalesmanId` set; promoter auto-linked from salesman's manager.
- Promoter → `createdByPromoterId` set.

Step 3 — Work the lead (activities)

1. Click the lead in the list.
2. Choose activity type: `VISIT`, `CALL`, `DEMO`, `FOLLOWUP`, etc.
3. Add notes and optional **Next follow-up** date.
4. Click **Log activity**.
5. Lead status may update (e.g. after `DEMO` → `DEMO_GIVEN`).

Step 4 — Convert to real customer (when ready)

1. With the same lead selected, open **Conversion pipeline**.
2. Confirm **Subscription plan** (e.g. `MONTHLY`, `YEARLY`).
3. Check **KYC verified** (or click **Mark KYC**).

4. Click **Save subscription** (updates conversion stage).
5. Enter **Owner username** and **Owner email** (prefilled; shop owner will receive password setup link).
6. Click **Complete conversion**.

On success:

- Lead status → CONVERTED
- Shop id shown (e.g. FF-LD-42) — real row in **shop-service**
- Message indicates if **owner invite email** was queued
- Commission may accrue per active commission plan (CONVERSION event)

Shop status: New shops start as PENDING until super admin activates (same as public registration).

Step 5 — Refresh

Click **Refresh** to reload summary cards and lead list.

6. Promoter vs salesman — differences

Capability	Promoter	Salesman
See leads	Created by self (createdByPromoterId)	Assigned to self (assignedSalesmanId)
Create lead	Yes	Yes
Log activities	Yes	Yes
Complete conversion	Yes	Yes
Manage other salesmen's leads in workspace	No (only own list filter)	No
Super admin: create salesman under promoter	Via admin UI	N/A

Hierarchy is enforced in **fieldforce-service** when a salesman is on the lead: promoter is derived from `salesman.promoter_id` if needed for commission.

7. Super admin dashboard (unchanged scope, different data)

Screen: Super Admin → Field Force (SuperAdminFieldforceComponent)

Super admin still manages:

- Promoters & territories
- Salesmen
- Commission plans
- Commission entries
- Legacy shop registrations (read-only / historical)

Recommended admin follow-up (not in field workspace):

- Use analytics API GET `/api/v1/fieldforce/analytics/funnel` for tenant funnel
- Approve/activate converted shops in shop registry (PENDING → active)

- Optionally add UI for lead approval — today conversion is driven from field workspace

8. API map (gateway → fieldforce-service)

All field-force UI calls use header `X-Tenant-Id` (and `X-Skip-Tenant-Context: true` from admin service).

User action	Method	Path
Dashboard cards	GET	/api/v1/fieldforce/analytics/dashboard
List my leads	GET	/api/v1/leads?promoterId= or ?salesmanId=
Create lead	POST	/api/v1/leads
List activities	GET	/api/v1/leads/{id}/activities
Log activity	POST	/api/v1/leads/{id}/activities
Get conversion	GET	/api/v1/leads/{id}/conversion
Update conversion	POST	/api/v1/leads/{id}/conversion
Complete conversion	POST	/api/v1/leads/{id}/conversion/complete

Complete conversion triggers **shop-service**:

POST /api/v1/internal/fieldforce/conversions → creates shop + owner invite.

9. Sequence — complete conversion

```
sequenceDiagram
    participant U as Promoter/Salesman
    participant UI as Field Force Workspace
    participant GW as API Gateway
    participant FF as fieldforce-service
    participant SH as shop-service
    participant AU as auth-service

    U->>UI: Complete conversion
    UI->>GW: POST /leads/{id}/conversion/complete
    GW->>FF: Forward + X-Tenant-Id
    FF->>SH: POST /internal/fieldforce/conversions
    SH->>SH: registerShopFromFieldforceConversion
    SH->>AU: Create owner invite
    AU-->>SH: Invite token
    SH-->>FF: merchantId, shopId, inviteQueued
    FF->>FF: lead=CONVERTED, commission accrual
    FF-->>UI: ConversionResponse
    UI-->>U: Success + shop id + invite status
```

10. Configuration required (ops)

Item	Purpose
Flyway V2 on fieldforcedb	Lead tables
fieldforce-service running (port 8090)	APIs
Gateway route /api/v1/leads/**, /api/v1/fieldforce/**	UI access
FIELDFORCE_SHOP_INTEGRATION_ENABLED=true	Real shop on conversion
FIELDFORCE_SHOP_INTEGRATION_BASE_URL=http://shop-service:8080	Shop client
shop.integration.auth-* on shop-service	Owner invite
Auth accounts with promoterId / salesmanId	Attribution

Local Docker: see docker-compose.yml fieldforce-service environment block.

11. Commission (how dashboard work ties to pay)

When commission plans include amounts for:

Event	When it fires
LEAD_CREATED	Lead saved
DEMO_COMPLETED	Activity type DEMO logged
CONVERSION	Conversion completed

Ledger: commission_entries with business_lead_id (not fake shop registration).

12. Troubleshooting

Symptom	Likely cause
"Missing promoter/salesman id"	Login account not linked in auth DB
"Duplicate lead" on save	Same mobile or nearby GPS/name match
Dashboard empty / error	fieldforce-service down or gateway route missing
Conversion fails	shop-service down or FIELDFORCE_SHOP_INTEGRATION_ENABLED=false
Shop created but no email	auth-service URL/key; invite still may be created
Lead list empty	Wrong role filter; lead created under another promoter/salesman

13. Files reference (implementation)

Area	Path
Field user UI	shop-management-ui/src/app/components/field-force-workspace/
API client	shop-management-ui/src/app/services/fieldforce-admin.service.ts
Post-login route	auth-session.service.ts → getPostLoginPath() → /field-force/workspace
Backend	fieldforce-service — BusinessLeadController, FieldActivityController, LeadConversionController
Shop creation	shop-service — FieldforceInternalConversionController
Architecture	docs/FIELDFORCE-LEAD-ARCHITECTURE.md

14. Quick reference card (printable)

In the app: Field Force Workspace → **Print quick reference** (opens a clean A4 page; allow pop-ups if blocked).

Do not use browser Ctrl+P on the full dashboard — the app shell can print as a tiny strip. Use the print buttons or open docs/fieldforce-guides/print-quick-reference.html.

FIELD FORCE WORKSPACE – QUICK STEPS

1. Save lead (prospect) – NOT a shop

2. Select lead → Log VISIT / DEMO / FOLLOWUP

3. KYC + subscription → Complete conversion

4. Owner gets invite email → shop activates after admin

Do NOT use "shop registration" for new prospects.

Document version: aligns with Lead → Conversion MVP (fieldforce V2 + workspace UI with activities and conversion).
